

## Procedure for creating a URL for a no-download link in Stream (SharePoint)

These instructions are for a cc tenant, but the procedure is the same for an edu tenant.

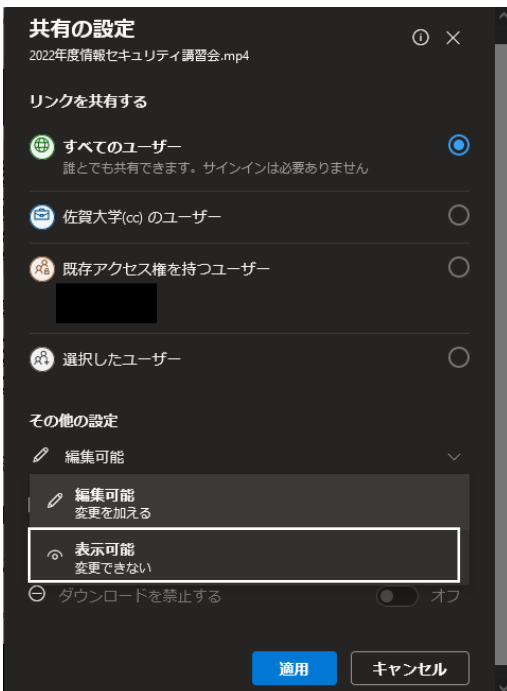

Open the video file in the new Stream and click "Share" in the "Share" menu.

Click the pencil mark on the "Send Link" screen, then click "Share Settings".

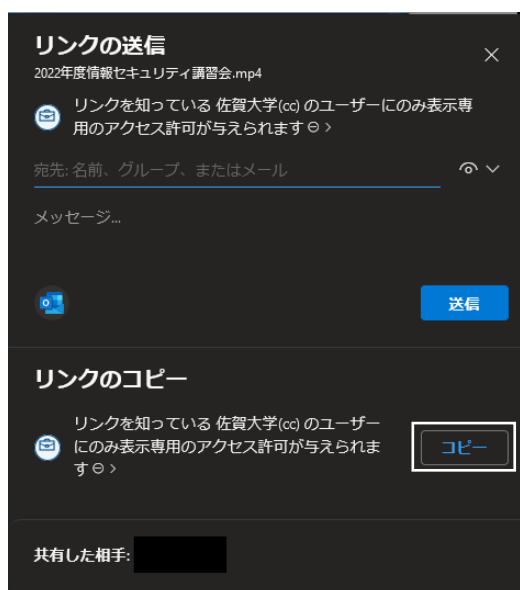

On the "Sharing Settings" screen, specify the users with whom you want to share the link, and set "Other Settings" to "Visible".

Turn "Prohibit downloading" to "On" and click "Apply".

Click "Copy" under "Copy Link" on the "Send Link" screen.

After clicking "Copy" on the link URL, open a notepad or similar tool and paste the link URL.
