

Getting Started Guide for the Opengate Network System for Visitors

Computer and Network Center, Saga University

Welcome to Saga University. In Saga University, all visitors bringing their own computer devices can access the internet through the authentication of the network system, called "Opengate".

The instruction to access the Opengate is the following.

1. Start your PC and set your wifi configured automatically.
2. Find an access point (SSID) of the wifi, displaying "ogwap★★". (★ includes numbers or nothing.) No passwords are required for this access point.
3. Open your web browser and open any URL starting from "http://". (If you set a HTTP proxy, unset it.)

4. A single sign-on authentication window with "Kacchi-kun", the mascot character of Saga University, will appear. Then enter your UserID and password. Your account is written in your application form. (Fig. 1)

5. After your successful authentication, an admission window appears and a portal website is newly opened. Leave the admission window to stay the network active. You can use internet services. (Fig. 2)

6. By closing the admission window, internet connections will be lost.
